

Differential Pressure Equipment

Walker Filtration manufacture a comprehensive range of Differential Pressure monitoring equipment for air, gas and liquid applications.

We offer a range of 16 models encompassing pop-ups, indicators and gauges in a number of sizes. They are designed to compliment the Walker range of filter housings plus other manufacturers housings.

Robust and corrosion resistant

The differential indicator and gauge use the Walker developed three magnet system. This combined with a purpose moulded rolling diaphragm ensures high accuracy, low hysteresis, no pressure behind the gauge face and no cross contamination.

Walker developed three magnet system

The electronic version includes a factory pre-set alarm switch offering a volt free contact facility for remote monitoring.

Walker Filtration also offers a complete design service to customise these products to fit any OEM application. Available in three pressure monitoring ranges and, manufactured from glass filled nylon, these products are robust and corrosion resistant suitable for many applications.

Applications include

Compressed Air Filters

Flanged Compressed Air Filters

High Pressure Filters

Medical Vacuum Filters

Vacuum Pump
